

OVERVIEW

The PP16 SHUNT EFP bypass relay operates as an automatic bypass shunt for control devices (such as other relay packs, toggle switches, and phase dimming packs) that are controlling emergency powered lighting loads. The relay is open when normal power is present, but will latch closed if normal power is lost. An elongated chase nipple facilitates attachment directly to a junction box or fixture through a 1/2" knockout. A push button is also provided which allow users the ability to test the emergency operation.

For a low voltage shunt, please visit our PP5LV shunt power pack solution:

FEATURES

- Automatically overrides emergency lights on upon loss of Normal Power circuit
- Test button
- Mounting via chase nipple
- Plenum rated
- Includes fuse integrated to relay wirelead for protection from load faults
- Meets NEMA410 ratings for LED/electronic ballast inrush

SPECIFICATIONS

Size:	(not incl. 1/2" chase nipple) 3.38" H x 2.53" W x 1.83" D (8.59 cm x 6.43 cm x 4.65 cm)
Weight:	6 oz
Mounting:	1/2" knockout (7/8" hole) on box or fixture
Color:	Red
Input Ratings:	120/277 VAC, 50/60 HZ
Output Ratings:	120/277VAC, 50/60 Hz, 16A – Tungsten, Standard Ballast, Electronic Ballast, General Purpose, 120VAC, 50/60 Hz, 1/2 HP – Motor, SCCR: 5KA
Relay Type:	Latching
Listings:	Emergency Management Equipment, UL916 (E167435) Emergency Power Equipment, UL924 (E342232)

ROHS Compliant

Warranty

Five-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note: Actual performance may differ as a result of end-user environment and application. Specifications subject to change without notice.

ADDITIONAL SPECIFICATION INSTRUCTIONS

PUSH-BUTTON TESTING:

As long as the primary control device or switch is in the open (lights off) position and normal power is present, you are able to simulate normal power being lost by pressing and releasing the unit's push-button one time. After a few seconds the relay will close for 4 seconds, then open back up and return to normal operation. A separate push-button test switch (not included) can also be wired in as shown in above diagrams.

INTERFACING WITH A FIRE ALARM PANEL:

To interface unit to a fire alarm system such that the relay is overridden closed (lights on) upon activation of the fire alarm system, the fire alarm system must provide a normally closed line-voltage rated relay which opens when the fire alarm system is activated. This relay must be put in series with the Black power sense line on the PP16 SHUNT EFP. When the normally closed relay opens, the PP16 SHUNT EFP will close its load relay to provide egress lighting when the fire alarm system is activated.
